

EVENIUM ONSITE

Evenium OnSite is revolutionizing the reception of guests at events.

In complete contrast with current methods employed, this application allows **guest arrivals to be treated 3 times faster**, gaining an estimated 80% of time spent on arrivals. The host is **warned in real-time** of their guest's arrival as information is updated instantaneously; the organiser **anticipates** the occupancy rate, **adapts** according to demand and is left with **more time to spend on his event.**

Some data...

A hostess handles **3 times more guests** than with a printed guest list.

Average handling time per guest:
with e-badge : **9 to 13 sec.**
without e-badge : 12 to 25 sec.

Up to **300 arrivals** with badges to be printed, per welcome desk, per hour.

No more than 3 people in line/desk, even at peak times (1 to 2 minutes maximum waiting time)

Functions

Guest search:

With the cross-search function (by name, company, host...), the guest list is filtered and results are **instantaneously displayed**.

Real-time management of guest arrivals:

Presences recorded in a single click and comments added are immediately visible, online.

Last-minute alterations and registrations:

Even if a guest has registered online 5 minutes prior to arrival, he will be registered at the welcome desk and given access to the site.

Management of e-badges

The code or barcode that guests receive via their confirmation email is used to register the guest at the event, print out the badge or personal schedule in a couple of seconds.

Increased responsiveness and flexibility for organisers onsite

Data collected by hostesses are automatically synchronised: the organiser has real-time access to guest statuses and taking into account this information, may alter table seating plans, manage the occupancy rate of a conference room accordingly...

Personalised notifications

The host is automatically warned of the arrival of the guest they have a meeting with, or a VIP guest, via sms or email.

Undeniable advantages for all of the actors during the event

How does it work ?

Set up in a minute, on any laptop

Requires **no prior training** to use as it is ergonomic and perfectly intuitive.

Works **with or without an internet connection:**

Without a connection, the application registers guests and comments locally. As soon as a connection is re-established, all the data is synchronised and available online.

Guest's Side

> a personalized reception, more fluid and professional

Organizer's Side

> guest lists continuously updated, including last-minute alterations
> more time spent networking and on the event itself

Inviting Parties' Side

> immediately notified of arrivals via sms, they are closer to their guests

Host and Hostesses Side

> gaining 80% in time, the reception becomes more human and convivial
> crossed-searches solve the trickiest of registration, in a few seconds
